Feature Engineering: RFM framework

RFM stands for Recency, Frequency, and Monetary.

<u>指標</u>	定義	量化標準		
Recency	最近一次消費	• Recency:計算train data 保單再購日期-理賠發生日過了幾個月/天/分鐘/秒/幾個工作天,建立mapping table 然後 transform test data.		
Frequency	消費頻率	• Counts:INSURED_RK(理賠+再購)資料筆數 • 計算個人在當年度的移動平均購買件數,總體購買件數		
Monetary	消費金額	REIMBURSED_YR_TW: 理賠金額(歸至該結案年度)AFYP_NT: 保單保費(&mean)		

Feature Engineering: Promotion Effect

Question?

在Train data中,不同計績等行銷活動、激勵制度是否造成季節性熱賣商品?

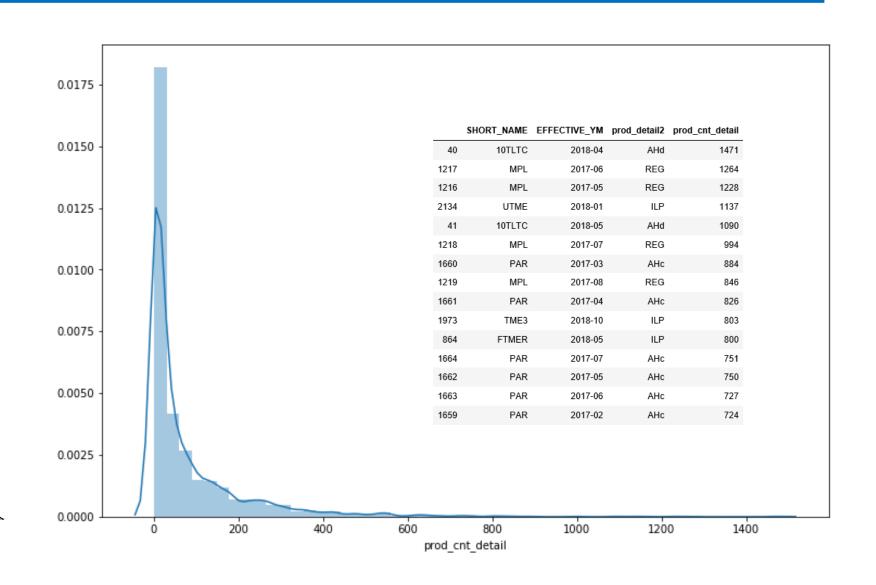

Answer?!

有!而且分配非常長尾;據此應該要計算客戶是受業務員影響才購買?還是本身對壽險商品就有一定程度認知?

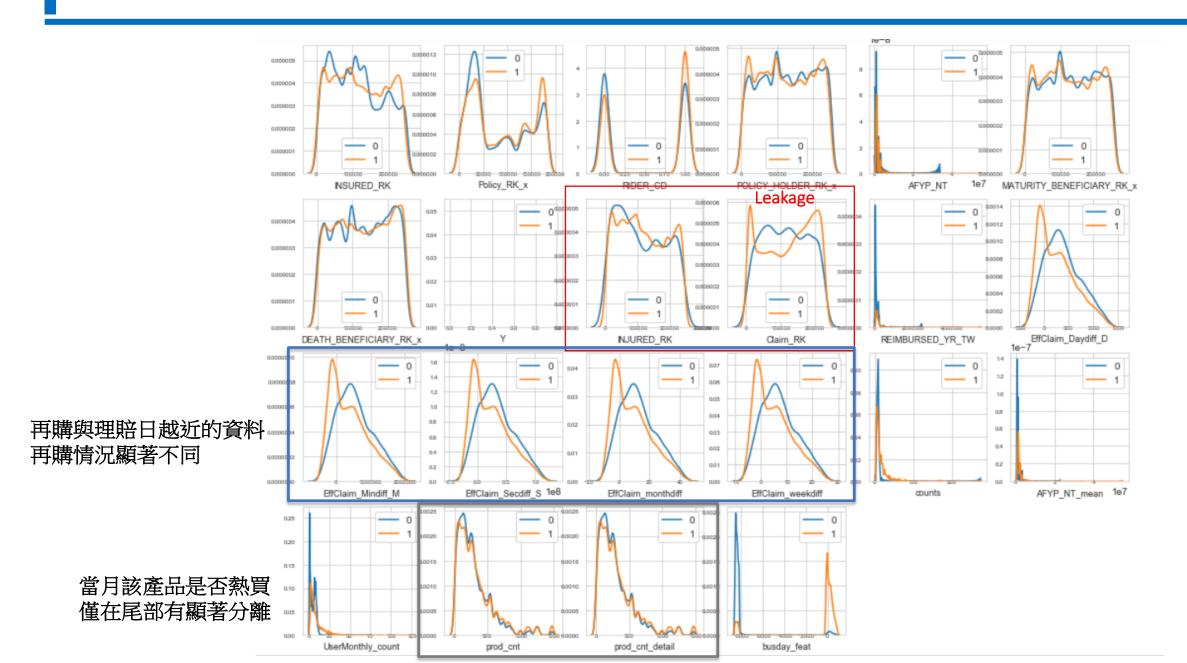

Baseline Solution:

Label Smoothing計算客戶對各商品的偏好程度,再以行銷力度加權,分離在相同計績力度下,各個客戶之

Summary

1. 在RFM架構下,日期與金額為客戶分群重要變數,並就不同分類給予以下建議:

Recency	Frequency	Monetary	
高	高	高	運用客戶壽險效用值排名、結合官網保障缺口推薦商品,更全面的推薦適合客戶的商品
低	高	高	運用歷史資料進行Categorical Smoothing,了解客戶壽險偏好並做個體行銷,促進近期未購買高價值客戶的回流

- 2. 行銷機制對再購行為本來就有影響,若提供業務員針對個別客戶的<u>Insurance Utility</u> Function相關資訊,將有利於對個別客戶做出差異化銷售,提升再購商機。
- 3. 透過Kernel可以分辨資料有意義值域與沒意義值域,降低資料探索偏差,提升資訊準確度。
- 4. 透過此Pipeline試算test data名單內外交易再購率,名單內為88%,名單外為10%,名單內再購率為名單外8倍。
- 5. 實務上**捨棄Recall拉高Precision**,以達資源使用效率最大化。
